There are 9 squares involved with the 7, so $9^2 = 81$ other squares. These other squares contain the 92 other mines. So the number of grids with a 7 at a particular spot is $81 \cdot 92 = 7488$. That is out of a total of $\binom{480}{99}$ different grids.

Probability of getting a 7 in Minesweeper - Math Stack Exchange

math.stackexchange : questions : probability-of-getting-a-7-in-minesweeper

We have $492556 = 125244$ ways for an easy grid to have an 8 somewhere. Out of the 1.88 trillion total easy grids, this gives a probability of about 6.10×10^{-8} . So, very rare indeed!

probability - How rare is it to get a R\$8\$ in minesweeper?
