However, if you want to see a list of dependent variables, the following table shows the results of the regression analysis. The dependent variable is the number of visits to the website, and the independent variables are the number of ads, the number of keywords, and the number of backlinks. The results show that the number of ads has a positive and significant effect on the number of visits, while the number of keywords and the number of backlinks have a negative and significant effect. This suggests that the number of ads is the most important factor in determining the number of visits to the website.

browser-based alpha version of the game, a great bit of nostalgia for the original Minecrafters out there.
