The TL;DR version of this review is: surprising light, extremely pocketable, does the job, not my dream charger but at /, the price it's well worth it.

We've covered a product of Lepow's before, the Moonstone. Like the Moonstone, the Poki comes /, with a cloth carrying case that you can stash a USB cable in (it appears to come with a 6-pin /, USB-&gt; MicroUSB,) or chuck your ID and credit card in and use it as a wallet while you're out. It's /, actually the first thing that stood out when I was looking at the device. The Moonstone is still going strong /, with a friend of mine a year later.

The battery delivers a 90% conversion efficiency rating according to specs on the /, manufacturer's website. Most batteries go from the high 70's to mid 80's. You want to see a higher number as /, this is how much power gets delivered with the rest being lost in conversion.

The Poki can charge and recharge at /, 2.1amps. This means you're not stuck for 20+ hours charging a 10,000mAh battery at 500mA. At 2.1 amp you should /, be able to charge this in under five hours and with 90% conversion efficiency you should have around 9000mAh of /, actual juice to spare. That should be enough for at least three complete charges from dead to full for any /, smartphone on the market today.

2.1 amp charging also means you're not going to spend ~7 hours charging a 3000mAh phone /, from dead, more like an hour and a half if your phone supports it.

After you've played through the single-player game, have waited till the end of its credits, and played a round of it, you'll be able to do so as many times as you'd like. Simply visit the Mission menu, select "Nacht der Untoten," and you'll be on your way!
